Codeverification

Logo Family

DPG certified system

Inline or offline quality verification of DPG-deposit label, GTIN/EAN- and QR-code in one system

The LogoFamily enables fast and reliable quality verification of DPG labels. GTIN8/13- and QR-codes can also be verified with this system according to the ISO standard. The verification results are displayed immediately. These can be automatically documented in an order-related subdirectory. These enormous time savings allow for a considerably higher test frequency.

The inline check with its freely definable warning limits enables control of the quality during the production process. This helps eliminate customer claims and enables continuous process improvement.

LogoCheck is an offline system within the LogoFamily. It is available both as a fixed stand-alone stationary solution and as a portable system.

LogoLine is the inline system within the LogoFamily. It is engineered to be fully implemented in each production process to guarantee the best production results.

-  fast: Verification of the label with immediate results
-  easy: Start up system and verify, no calibration needed
-  precise: Highest precision with automatic reporting
-  efficient: Multiple functionality DPG-, GTIN/EAN- and QR-Code verification
